INTRODUCTION TO COURSE

SESSION 2025/2026 SEMESTER 2

SECX / SECV 2113 HUMAN-COMPUTER INTERACTION

Lecturer Information

Name	Office	Contact no.	E-mail *@utm.my*
Nur Zuraifah Syazrah bt. Othman. Dr.	N28 206-04	07-5538827	zuraifah
Nor Anita Fairos bt. Ismail	N28 206-11	07-5538827	noranita

Lecturer Information

Nor Anita Fairos binti Ismail

- α Emerging Computing Department
- α Faculty of Computing, UTM
- α Room : Block N28, 206-11 (Level 2)
- α E-mail : noranita@utm.my
- α Tel. : 013-9834355

Lecturer Information

Sheikh Nasir bin Kamarudin

- Co-Lecturer | VicubeLab RG
- Virtual Space Center (VSC), TechnoRADA.
- E-mail : sheikhnasir@yahoo.com
- Tel. : 016-7075226 (Office Hour Only)

Course Information

- **Course code:**
  - SECX / SECV / SCSV 2113
- **Course name:**
  - INTERAKSI KOMPUTER MANUSIA (HCI)

MAN MACHINE INTERFACE

Course Synopsis

The course **introduces** students to **foundational Human–Computer Interaction** (HCI) through core theories, design processes, and applied practices in user experience (UX) design. It **emphasizes** both conceptual understanding and practical application. Students will **explore** an evaluation-centered **UX lifecycle**, emphasizing **usability**, **usefulness**, and **emotional** impact as integral components of **user experience**. Students will study and **apply methods** such as contextual inquiry, requirements analysis, design-informing models, design thinking, ideation, sketching, conceptual design, and formative evaluation. The lifecycle is presented as a flexible template adaptable to different development contexts, ensuring relevance to varied project constraints. The course is **delivered** through a combination of lectures, case studies, and project-driven activities that emphasize hands-on design and iterative evaluation. By the end of the course, **students will be able** to analyze user needs, design user-centered solutions, and evaluate interactive systems using HCI theories and UX methods. They will also develop the ability to apply iterative design processes to create meaningful, usable, and impactful digital experiences.

Course Synopsis

- Present the physical and **informational aspects** of the human computer interaction
- **Emphasized** on the **process of user interface design** and development including user-centered design/UX and task analysis
- The course also stresses on the **user interface evaluation** and experiments through group as well as individual project work

Learning Course Outcomes

CO1 Apply the concept of human–computer interaction and the application of human factors as a multi-level process of communication through UX design and evaluation of interactive systems.

CO2 Analyse the theoretical knowledge to issues that arise in the design of interactive systems.

CO3 Build a prototype development project according to principles and guidelines of human–computer interaction.

CO4 Ability to act responsibly across the project life cycle by making ethical decisions that prioritise community, environment, and societal well-being.

Generic Skills

- Ability to **work in teams** through group project and assignments
- Ability to **communicate** confidently through presentations and written assignments

Weekly Topics Schedule

- Refer Course Information (CI) in eLearning.

Highlights

- **NO** Mid Semester Test!
- Learning by Doing!
- Commit & dedicate to your Project!
- Project – is a GROUP project, BUT, individual project marks will be influenced **by peer assessments**
- **HCI Day:** Week 15 (will be update later)
- Restructuring class due balancing class size (Week 2 – expected done)

Assessments

- Assignment (Individual/Group/Activities)
- Group project (5-6 persons per group)
- Group project Must consist of mixed in race & gender, local & international students.

Assessments

Continuous Assessment		%
1	Assignment (Group)	5
2	Project: Part 1	5
3	Project: Part 2	10
4	Project: Part 3	10
5	Project: Part 4	20
6	Assignment (Individual)	15
7	Peer Assessments	5

Assessments

Final Assessment		%
1	Final Exam	30

Course Policy

- **Attendance is compulsory** and will be taken in every lecture session (students with **less than 80%** total attendance are not allowed to sit for final exam)
- Students are required to behave and follow the dressing regulation and etiquette which has been stated in University regulations while in class, in lab, and in exam hall
- Any form of **plagiarisms is NOT ALLOWED**
- Exercises will be given in class, and some may be taken for assessment
- Make up exam will not be given, except to students who are sick and submit medical certificate which is confirmed by UTM panel doctors
- **Assignments must be submitted on the due dates** (some points will be deducted for the late submission & assignments that are hand over after three days from the due dates will not be accepted)
